

Approved Product List update

Icon Water has made two important changes to the Approved Product List (APL). We are transitioning to a **Nut and Tail** water meter with **DN20 water meters** and **connection kits for Class B developments** have changed.

DN20 water meters

After 1 October 2025, Icon Water will **only** be issuing 20mm **Nut and Tail water meters**. This will replace 20mm Ball Joint water meters to align with nationally adopted specifications. Nut and Tail water meters have a **smaller** outside diameter, at the threaded connection, than Ball Joint water meters.

When ordering Inground or Wall-bracket water meter kits, only select Nut and Tail compatible kits.

Please note Ball Joint water meter unions do not fit Nut and Tail water meters.

Nut and Tail water meter (new)

Ball Joint water meter (outgoing)

Connection kits for Class B developments

After 1 October 2025, Icon Water will cease supplying connection kits for Class B development sub-meters.

Icon Water will no longer provide items such as meter pits, isolation valves (with integrated unions), wall brackets and meter spacers for metering of unit titles. These items **must** now be purchased from trusted plumbing outlets.

Icon Water will return meter spacers from inground water meter kits and wall bracket water meter kits to the manufacturer for recycling. Please help us by bringing meter spacers to our office in Mitchell when picking up approved meters.

Sub-metering connection kits that meet Icon Water requirements are manufactured by All Valve Industries and Strongcast. Please ensure you use the correct model/product code from Icon Water's APL when ordering.

Approved sub-metering connection kits for Class B developments

Inground water meter kits for sub-metered connections

All Valve Industries inground water meter kit
(model/product code AVMB-2BSP-IW/BP)

Strongcast inground water meter kit
(model/product code SCMB2BSP/S)

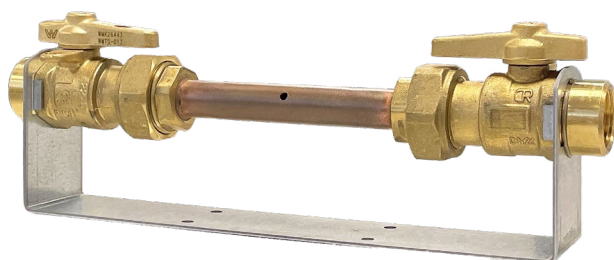

Inground water meter kits include:

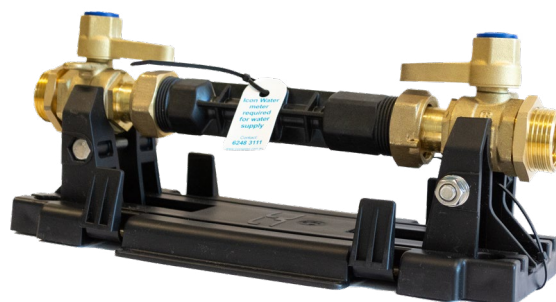

- Upstream and downstream ball valves (unions are integrated into the ball valve).
- A meter spacer (to be returned, by the plumber, to Icon Water in exchange for a water meter).
- A meter box and lid.
- A base bracket (attaches to the box to set meter depth).

Above-ground wall bracket water meter kits for sub-metered connections

All Valve Industries wall bracket water meter kit
(model/product code SMLIMSS-BP)

Strongcast wall bracket water meter kit
(model/product code SCMLIM20Q30GF/S)

Above-ground wall bracket water meter kits include:

- Upstream and downstream ball valves (unions are integrated into the ball valve).
- A meter spacer (to be returned, by the plumber, to Icon Water in exchange for a water meter).
- A wall bracket (or use a mechanical fixing system that achieves the minimum set-out tolerances).
